

Year 8 Social Science 2017

Term 1: Technology and its impact on Society

Term 2: Ecotourism

Term 3: Great civilisations

Term 4: Causes and effects of conflict

Social Science focuses on the study of society and the relationship between individuals within society. It covers a wide spectrum of subjects, including economics, political science, sociology, history, geography, archaeology, anthropology and law.

The Year 8 program adopts an inquiry approach to all topics covered. Students will learn how to organise their ideas and thinking. How to devise compelling research questions and how they can source the necessary information to answer these questions. Various note-taking and paraphrasing skills are developed before students select their own format to present their findings in a thorough and creative manner.
